

NORDICSTAR SV5

Semi-vertical multideck

Superior mid-floor merchandising.

A floor space-efficient mid-floor merchandiser.

Reliable high performer

The NordicStar SV5 is a new space-efficient semi-vertical multideck delivering a number of customer benefits. Designed on the same platform as the Epta MD5 and MD7 multidecks, the NordicStar SV5 delivers more product volume for the same footprint compared to previous semi-verticals. Unified product design enables high visual impact throughout the store.

The low height of the semi-vertical cabinets provides great visibility over the store making shopping convenient for consumers. The geometry of the SV5 upper shelf provides more room for products to be displayed. Epta's evaporator design delivers high performance even in the toughest conditions. These are just some of the benefits that make NordicStar SV5 the ideal solution for mid-floor merchandising.

Space-efficient Epta design

The NordicStar SV5 has a space-efficient bottom evaporator design resulting in optimal volume in relation to floor space. The cabinet range has 89 cm and 99 cm depth variants, making it a perfect match even for smaller store formats. When more volume is needed, the 99 cm model provides it in a compact foot-print.

An energy efficient high performer

The NordicStar SV5 utilises Epta's evaporator design which is familiar from the MD5 cabinet. Preventing icing and securing high performance even in the toughest conditions are robust features of the MD5. The open version of the cabinet is classified as 3M1 and the door version as 3M0 combining maximum temperature performance with energy efficiency. Naturally, both the door and open versions of the cabinet have Epta's unique patented Encore air curtain technology as standard saving energy for the benefit of the economy and environment.

Excellent product visibility and convenient shopping

The NordicStar SV5 has a new design providing shoppers with an optimised view of the groceries. It is available in two heights, 145 and 165 cm. Single and double glass doors are available as an option, ensuring a convenient shopping experience for consumers.

Easier drainage and refrigeration piping installation

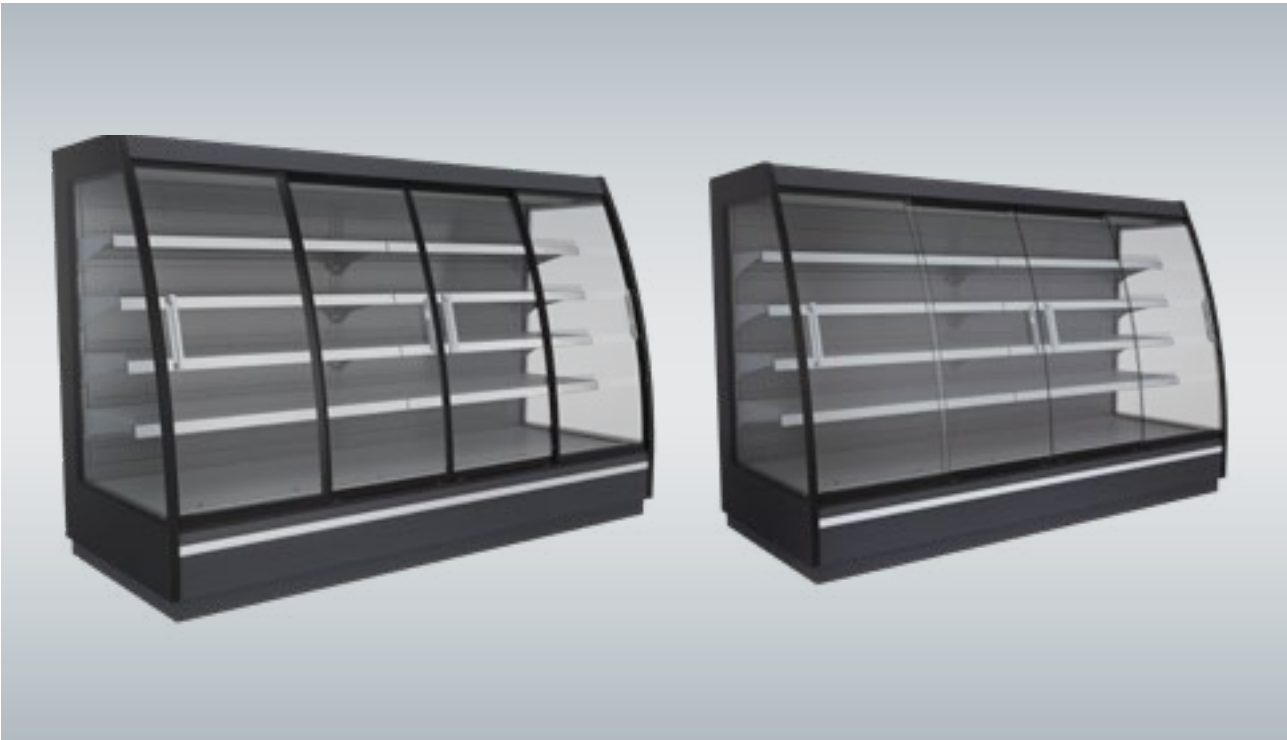

The NordicStar SV5 has been designed with ease of installation in mind. Piping pre-installed in the factory makes on-site installation fast and agile, and installation time is significantly shorter. The drainage connection has been cleverly located at the front of the cabinet for easy installation and access.

CHOOSE THE NORDICSTAR SV5 FOR

- Great mid-floor product presentation
- Flexibility for different store formats with 890 cm and 990 cm cabinet depths
- Space-efficient bottom evaporator design
- High-performance open and door cabinet
- Easier drainage and refrigeration piping installation
