## 1. INTRODUZIONE

### 1.1 Introduzione

Il documento "Cleaning Instructions" indica come pulire il banco.

Le istruzioni d'uso sono disponibili anche su:  
[www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 Informazioni generali di sicurezza

Mai interrompere la catena del freddo dei prodotti esposti.

Prima di tutte le operazioni di manutenzione e pulizia, disconnettere l'apparecchiatura dalla rete elettrica ed assicurarsi che il personale non autorizzato possa riconnettere l'alimentazione elettrica.

Assicurarsi che la zona di lavoro sia sufficientemente illuminata durante le operazioni di pulizia e manutenzione e utilizzare ulteriori fonti di illuminazione se necessario.

Le porte e le pareti in vetro sono dotate all'interno di una pellicola antiappannamento. Non utilizzare detergenti contenenti sostanze abrasive, fortemente acide o caustiche.

Fare attenzione a non toccare parti in rotazione dell'apparecchiatura (ventolatori) con le dita, asciugamani o altri strumenti.

Non rimuovere le protezioni e le coperture di protezione.

### 1.3 Motivi per la pulizia

Per presentare le merci in modo attraente e igienico, è importante pulire regolarmente il banco. Una pulizia regolare impedisce inoltre che muffe e batteri nocivi si depositino nei mobili, poiché la polvere umida fornisce un terreno fertile ideale.

La pulizia regolare è essenziale anche per la funzione tecnica. Questo è l'unico modo per garantire uno scambio termico ottimale e che l'aria possa fluire facilmente nell'apparecchiatura.

## 2. MATERIALI E DETERGENTI

### Abiti da lavoro

- Guanti protettivi
- Indumenti protettivi
- Occhiali di sicurezza

### Detergente per superfici diverse dal vetro

- Acqua
- Detergente delicato
- Spugne, stracci e panni morbidi antigraffio

### Detergente per superfici in vetro

- Acqua
- Detergente delicato
- Detergente per vetri standard
- Smacchiatori d'olio
- Spugne, stracci e asciugamani di carta antigraffio

### Quanto segue non deve essere utilizzato

- Detergenti fortemente corrosivi
- Detergenti acidi o caustici
- Agenti infiammabili
- Acetone
- Agenti detergenti contenenti solventi
- Detergenti abrasivi
- Detergente a getto d'acqua o altro getto d'acqua forte per pulire

|                                                                                   |                                                                                                       |                                                                                     |

### 3. PULIZIA

#### 3.1 Pulizia esterna

- Lavare l'esterno del banco solamente con acqua tiepida e sapone neutro o detergente neutro
- Asciugare con cura con spugne non abrasive antigraffio, stracci e panni morbidi

#### Pulizia delle porte:

- Lavare le parti in vetro con prodotti dedicati ai vetri e con spugne non abrasive antigraffio, stracci o panni di carta

Eventuali residui di grasso devono essere rimossi con specifici smacchiatori ad olio.

#### 3.2 Pulizia interna

- Rimuovere i prodotti esposti.
- Evitare di interrompere la catena del freddo.
- Disconnettere l'apparecchiatura dalla rete elettrica e assicurarsi che la riconnessione possa essere effettuata solo da personale autorizzato.

#### Pulizia dei ripiani:

- Le superfici devono essere lavate con acqua tiepida e sapone neutro o detergente neutro.

- Per agevolare le operazioni di pulizia è possibile rimuovere i ripiani dalle loro posizioni nella scaffalatura.

Fig. 4

Ruotare il ripiano prima di estrarlo dall'apparecchiatura

- Assicurarsi che le staffe di supporto dei ripiani siano nella posizione corretta e completamente bloccate nei loro supporti durante la loro reinstallazione.

Fig. 5

### Pulizia della griglia di ripresa dell'aria:

- Pulire la griglia di ripresa dell'aria con un aspirapolvere e/o pulire la griglia con un panno umido.

Fig. 6

### 3.3 Rimuovere il cestone

- Il banco può essere fornito con un cestone estraibile.

Fig. 7

|                                                                                   |                                                                                                       |                                                                                     |

### 3.4 Pulizia del piano di fondo

La pulizia del piano di fondo deve essere eseguita solamente da personale addestrato.

- Rimuovere i prodotti esposti.
- Evitare di interrompere la catena del freddo.
- Disconnettere l'apparecchiatura dalla rete elettrica e assicurarsi che la riconnessione possa essere effettuata solo da personale autorizzato.
- Rimuovere il cestone come descritto nel capitolo "Rimuovere il cestone".

- Pulire il piano di fondo con uno straccio umido.

- Rimuoverlo.

- Rimuovere la griglia di ripresa dell'aria e la griglia di mandata dell'aria e pulirle utilizzando un panno umido.

Fare attenzione a rimuovere le ventole dell'evaporatore, svitando le viti! Non toccare con le dita, stracci o altra attrezzatura.

|                                                                                   |                                                                                                       |                                                                                     |

- Pulisci il piano di fondo con un sapone neutro o un detergente in acqua tiepida. Controllare che lo scarico non sia ostruito.
- Reinstallare la griglia di ripresa d'aria.

Fig. 20

- Reinstallare il piano di fondo.

Fig. 21

- Reinstallare il cestone estraibile come descritto nel capitolo "Rimuovere il cestone".

## 3.5 Messa in servizio

- Dopo aver completato la pulizia e verificato attentamente che l'interno del mobile sia completamente asciutto, rimettere in funzione l'apparecchio ripristinando l'alimentazione.
- Il banco inizierà quindi il suo ciclo di raffreddamento. Far raggiungere al banco una temperatura di  $-18^{\circ}\text{C}$  prima di ricaricare la merce.

## 1. INTRODUCTION

### 1.1 Périmètre

Le document « Cleaning instruction » indique comment nettoyer un présentoir de produits réfrigérés pour aliments surgelés.

Ces instructions sont aussi disponibles sur : [www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 Informations générales de Sécurité

Ne jamais interrompre la chaîne du froid des denrées exposées !

Avant d'entreprendre toute opération d'entretien ou de nettoyage, débrancher l'appareil de l'alimentation électrique et le protéger contre tout branchement par des personnes non autorisées.

S'assurer que la zone de travail est suffisamment éclairée pendant les activités de maintenance et de nettoyage et utiliser une source d'éclairage supplémentaire si nécessaire.

Les portes et les parois vitrées sont pourvues d'un film intérieur antibuée. Ne pas utiliser de détergent contenant des substances abrasives, fortement acides ou caustiques.

Attention à ne pas toucher les pièces en rotation du meuble (ventilateurs) avec les doigts, des serviettes ou d'autres outils.

Ne pas retirer les protections ni les couvercles.

### 1.3 Pourquoi nettoyer

Afin de présenter les produits et denrées de façon attrayante et hygiénique, il est important de nettoyer régulièrement le meuble réfrigéré. Un nettoyage régulier empêche également les moisissures et les bactéries nocives de s'installer dans le meuble, car la poussière humide constitue un terrain de reproduction idéal.

Un nettoyage régulier est également essentiel pour le bon fonctionnement technique. C'est le seul moyen de garantir un échange thermique optimal et une bonne circulation de l'air dans le meuble.

### 3. NETTOYAGE DU MEUBLE

#### 3.1 Nettoyage des parties extérieures du meuble frigorifique de vente

- Nettoyer les surfaces extérieures de la vitrine avec un savon doux ou un détergent dans de l'eau tiède uniquement.
- Essuyer soigneusement avec des éponges, des chiffons et des chiffons doux, non abrasifs.

#### Nettoyage des portes et joues vitrées :

- Les nettoyer en utilisant un nettoyant pour vitres standard avec une éponge non abrasive, un chiffon ou une serviette en papier.

Les résidus graisseux doivent être éliminés à l'aide d'un détachant pour huile.

#### 3.2 Nettoyage de l'intérieur du meuble frigorifique de vente

- Retirer les produits/denrées exposés dans les meubles frigorifiques de vente.
- Ne pas interrompre la chaîne du froid.
- Débrancher l'appareil de l'alimentation électrique et le protéger contre tout branchement par des personnes non autorisées.

#### Nettoyage des étagères :

- Les surfaces peuvent être nettoyées avec un savon doux ou un détergent dans de l'eau tiède.

|                                                                                   |                                                                                                       |                                                                                     |

- Nettoyer le bac de fond avec un savon ou un détergent doux dans de l'eau tiède. Vérifier que le siphon n'est pas bouché.
- Réinstaller les grilles de reprise.

Fig. 20

- Réinstaller le plateau de cuve.

Fig. 21

- Réinstaller le panier comme décrit dans le chapitre "Retrait du panier".

## 3.5 Redémarrage du meuble

- Après avoir terminé le nettoyage et vérifié attentivement que l'intérieur du meuble est complètement sec, remettre l'appareil en service en rebranchant l'alimentation électrique du meuble.
- Le meuble commencera alors son cycle de refroidissement. Laisser les meubles atteindre une température affichée de -18°C avant de recharger les denrées/produits retirés.

## 1. INTRODUCTION

### 1.1 Scope

The document "Cleaning Instructions" indicates how to clean the vertical frozen cabinet.

Instructions for use are also available on:  
[www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 General safety information

Do never interrupt the cooling chain of displayed goods.

Before starting any maintenance or cleaning, disconnect the equipment from the electrical power supply and secure against re-connecting by unauthorized persons.

Ensure that the working area is sufficiently illuminated during maintenance and cleaning activities and use an additional lighting source if necessary.

Doors and glass walls are provided with an antifog liner film inside. Do not use any detergent containing abrasive, strongly acidic or caustic substances.

Beware of touching any rotation part of the cabinet (fans) with fingers, towels or other tools.

Do not remove any protective guards and covers.

### 1.3 Reasons for cleaning

In order to present goods attractively and hygienically, it is important to clean the freezer cabinet regularly. Regular cleaning also prevents mould and harmful bacteria from settling in the furniture, as damp dust provides an ideal breeding ground.

Regular cleaning is also essential for the technical function. This is the only way to ensure that an optimal heat exchange takes place and that air can flow easily in the cabinet.

|                                                                                   |                                                                                                       |                                                                                     |

### 3. CLEANING THE APPLIANCE

#### 3.1 Cleaning of the refrigerated display cabinet exterior

- Clean the outer surfaces of the display case with mild soap or detergent in lukewarm water only.
- Wipe carefully with non-scratching sponges, rags and soft cloths.

#### Cleaning of the glass doors and glass walls inside:

- Clean it by using standard glass cleaner with a non-abrasive sponge, a rag or a paper towel.

Greasy residue must be removed using oil stain remover.

#### 3.2 Cleaning of the refrigerated display cabinet interior

- Remove the displayed goods into chest freezer or freezer rooms.
- Avoid interrupting the cooling chain.
- Disconnect the cabinet from the electrical power supply and secure against re-connecting by unauthorized persons.

#### Cleaning of the shelves:

- The surfaces can be cleaned with mild soap or detergent in lukewarm water.

- For convenient cleaning you can detach the shelves and take them off the rack.

Please rotate the shelf to extract it from the cabinet.

- Make sure that the brackets are in the correct position and that the brackets lock completely into the support when you reattach them.

### Cleaning of the air return grid:

- Clean the air return grid with a vacuum cleaner and/or clean the grid with a moist rag.

### 3.3 Removing of the basket

- The freezer cabinet can be supplied with a pull-out basket.

|                                                                                   |                                                                                                       |                                                                                     |

PT

- Clean the base tray with mild soap or detergent in lukewarm water. Check that the drain is unclogged.
- Reinstall the air return grid.

- Reinstall the base deck.

- Reinstall the basket as described in chapter "Removing of the basket".

## 3.5 Cabinet restart

- After completing the cleaning and attentively checking that the inside of the cabinet is completely dry, put the appliance back into operation by reconnecting power to the cabinet.
- The cabinet will then start its cooling cycle. Allow cabinets to reach a displayed temperature of -18°C before reloading the removed goods.

## 1. EINFÜHRUNG

### 1.1 Der Zweck dieses Dokuments

Das Dokument „Cleaning Instructions“ zeigt, wie eine Vitrine mit gekühlten Produkten für gefrorene Lebensmittel gereinigt wird.

Die Bedienungsanleitung ist auch unter verfügbar:  
[www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 Allgemeine Sicherheitshinweise

Die Kühlkette der gekühlten Waren darf keinesfalls unterbrochen werden.

Trennen Sie das Gerät vom Stromnetz, bevor Sie Wartungs- oder Reinigungsarbeiten durchführen und stellen Sie sicher, dass die Stromzufuhr keinesfalls durch unbefugte Personen wieder eingeschaltet wird.

Stellen Sie sicher, dass der Arbeitsbereich während der Wartungs- und Reinigungsarbeiten ausreichend beleuchtet ist, und schalten Sie, falls erforderlich, eine zusätzliche Lichtquelle ein.

Die Türen und Glaswände sind von innen mit einer Antibeschlagfolie ausgerüstet. Verwenden Sie keine Scheuermittel oder Reinigungsmittel, die stark säurehaltige oder ätzende Substanzen enthalten.

Achten Sie darauf, mit den Fingern, Handtüchern oder anderen Werkzeugen keine rotierenden Geräteteile (Lüfter) zu berühren.

Entfernen Sie keine Schutzvorrichtungen oder Abdeckungen.

### 1.3 Gründe für eine Reinigung

Damit die Waren auf attraktive und hygienische Weise präsentiert werden, ist eine regelmäßige Reinigung des Kühlmöbels unverzichtbar. Eine regelmäßige Reinigung verhindert außerdem, dass sich Schimmel und schädliche Bakterien auf den Oberflächen ansiedeln, denn für sie bietet feuchter Staub einen idealen Nährboden.

Auch für den reibungslosen Betrieb der technischen Komponenten ist eine regelmäßige Reinigung entscheidend, denn nur dann ist gewährleistet, dass ein optimaler Wärmeaustausch stattfindet und die Luft im Kühlmöbel ungehindert zirkulieren kann.

|                                                                                   |                                                                                                       |                                                                                     |

### 3. REINIGUNG DER KÜHLMÖBEL

#### 3.1 Reinigung der Außenflächen der Kühlmöbel

- Geben Sie für die Reinigung der Außenflächen der Kühlmöbel etwas Seife oder Reinigungsmittel in lauwarmes Wasser.
- Wischen Sie die Oberflächen vorsichtig ab, verwenden Sie dafür einen Schwamm oder Lappen ohne raue Oberfläche bzw. ein weiches Tuch.

#### 3.2 Reinigung des Kühlmöbel-Innenraums

- Legen Sie die Waren in eine Tiefkühlschränke oder gekühlte Tiefkühlräume.
- Vermeiden Sie eine Unterbrechung der Kühlkette.
- Trennen Sie das Gerät vom Stromnetz und stellen Sie sicher, dass der Strom keinesfalls durch unbefugte Personen wieder eingeschaltet wird.

#### Reinigung der Glastüren und der Glaswände im Innenraum:

- Verwenden Sie einen handelsüblichen Glasreiniger und einen Schwamm oder Lappen ohne raue Oberflächen bzw. ein Papiertuch.

Fettige Rückstände müssen mit Ölfleckenentferner beseitigt werden.

#### Reinigung der Einlegeböden:

- Geben Sie für die Reinigung der Oberflächen etwas Seife oder Spülmittel in lauwarmes Wasser.

- Geben Sie für die Reinigung der Auslagefläche etwas Seife oder Reinigungsmittel in lauwarmes Wasser. Stellen Sie sicher, dass der Abfluss frei ist.
- Setzen Sie die Lüftungsgitter wieder ein

Abb. 20

- Setzen Sie die Auslagefläche wieder ein.

Abb. 21

- Setzen Sie den Korb wieder ein, wie in Kapitel "Herausnehmen des Korbes".

## 3.5 Neustart des Kühlmöbels

- Nach erfolgter Reinigung stellen Sie sicher, dass das Innere des Kühlmöbels vollständig trocken ist. Erst dann schließen Sie es wieder an die Stromversorgung an und nehmen es in Betrieb.
- Der Kühlkreislauf startet. Warten Sie, bis die angezeigte Temperatur bei  $-18^{\circ}\text{C}$  liegt, bevor Sie das Kühlmöbel befüllen.

## 1. INTRODUCCI  N

### 1.1 Alcance

El documento "Cleaning Instructions" indica c  mo limpiar un expositor de productos refrigerados para alimentos congelados.

Las instrucciones de uso tambi  n est  n disponibles en:  
[www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 Informaci  n general de seguridad

No interrumpa nunca la cadena de refrigeraci  n de los productos expuestos.

Antes de iniciar cualquier mantenimiento o limpieza, desconecte el equipo de la fuente de alimentaci  n el  ctrica y aseg  relo contra la reconexi  n por parte de personas no autorizadas.

Aseg  rese de que el   rea de trabajo est   suficientemente iluminada durante las actividades de mantenimiento y limpieza y utilice una fuente de iluminaci  n adicional si es necesario.

Las puertas y las paredes de vidrio est  n provistas de una pel  cula de revestimiento antivaho en el interior. No utilice ning  n detergente que contenga sustancias abrasivas, fuertemente   cidas o c  usticas.

Tenga cuidado de tocar cualquier parte giratoria del gabinete (ventiladores) con los dedos, toallas u otras herramientas.

No retire ninguna protecci  n ni cubierta.

### 1.3 Razones para limpiar

Para presentar los productos de forma atractiva e higi  nica, es importante limpiar el armario del congelador con regularidad. La limpieza regular tambi  n evita que el moho y las bacterias da  inas se asienten en los muebles, ya que el polvo h  medo proporciona un caldo de cultivo ideal.

La limpieza regular tambi  n es esencial para la funci  n t  cnica. Esta es la   nica forma de garantizar que se produzca un intercambio de calor   ptimo y que el aire pueda fluir f  cilmente en el armario.

### 3. LIMPIEZA DEL APARATO

#### 3.1 Limpieza del exterior de la vitrina refrigerada

- Limpie las superficies exteriores de la vitrina con jab  n suave o detergente solo con agua tibia.
- Limpie cuidadosamente con esponjas que no rayen, trapos y pa  os suaves.

#### Limpieza de las puertas de cristal y paredes de cristal en el interior:

- L  mpielo con un limpiacristales est  ndar con una esponja no abrasiva, un trapo o una toalla de papel.

Los restos de grasa deben eliminarse con quitamanchas de aceite.

#### 3.2 Limpieza del interior de la vitrina refrigerada

- Retire los productos expuestos en el arc  n congelador o en las c  maras frigor  ficas.
- Evite interrumpir la cadena de refrigeraci  n.
- Desconecte el armario de la fuente de alimentaci  n el  ctrica y aseg  relo contra la reconexi  n por parte de personas no autorizadas.

#### Limpieza de los estantes:

- Las superficies se pueden limpiar con jab  n suave o detergente en agua tibia.

- Para una limpieza conveniente, puede separar los estantes y sacarlos del estante.

Gire el estante para extraerlo del gabinete.

- Asegúrese de que los soportes estén en la posición correcta y que los soportes encajen completamente en el soporte cuando los vuelva a colocar.

## Limpieza de la rejilla de retorno de aire:

- Limpie la rejilla de retorno de aire con una aspiradora y/o limpie la rejilla con un trapo húmedo.

## 3.3 Retiro de la canasta

- El armario congelador se puede suministrar con una cesta extraíble.

|                                                                                   |                                                                                                       |                                                                                     |

- Vuelva a instalar la cesta como se describe en el capítulo "Retiro de la canasta".

## 3.5 reinicio del gabinete

- Después de completar la limpieza y verificar atentamente que el interior del mueble está completamente seco, vuelva a poner en funcionamiento el aparato volviendo a conectar la alimentación al mueble.
- El gabinete entonces comenzará su ciclo de enfriamiento. Permita que los gabinetes alcancen una temperatura mostrada de -18°C antes de volver a cargar las mercancías retiradas.

## 1. INTRODUÇÃO

### 1.1 Alcance

O documento "Cleaning Instructions" indica como limpar um expositor de produtos refrigerados para alimentos congelados.

As instruções de uso também estão disponíveis em:

[www.eptarefrigeration.com](http://www.eptarefrigeration.com).

### 1.2 Informações gerais de segurança

Nunca interrompa a cadeia de refrigeração dos produtos expostos.

Antes de iniciar qualquer manutenção ou limpeza, desconecte o equipamento da rede elétrica e proteja-o contra religação por pessoas não autorizadas.

Certifique-se de que a área de trabalho esteja suficientemente iluminada durante as atividades de manutenção e limpeza e use uma fonte de iluminação adicional, se necessário.

As portas e paredes de vidro são fornecidas com uma película anti-embaciamento no interior. Não use nenhum detergente que contenha substâncias abrasivas, fortemente ácidas ou cáusticas.

Cuidado ao tocar em qualquer parte rotativa do gabinete (ventiladores) com os dedos, toalhas ou outras ferramentas.

Não remova quaisquer proteções e tampas de proteção.

### 1.3 Motivos da limpeza

Para apresentar os produtos de forma atrativa e higiênica, é importante limpar regularmente o gabinete do freezer. A limpeza regular também evita que o mofo e as bactérias nocivas se instalem nos móveis, pois a poeira úmida é um terreno fértil ideal.

A limpeza regular também é essencial para a função técnica. Esta é a única maneira de garantir que ocorra uma troca de calor ideal e que o ar possa fluir facilmente no gabinete.

### 3. LIMPANDO O APARELHO

#### 3.1 Limpeza do exterior do expositor refrigerado

- Limpe as superfícies externas da vitrine com sabão neutro ou detergente apenas em água morna.
- Limpe cuidadosamente com esponjas, panos e panos macios que não risquem.

#### Limpeza das portas de vidro e paredes de vidro no interior:

- Limpe-o usando um limpador de vidro padrão com uma esponja não abrasiva, um pano ou uma toalha de papel.

Resíduos gordurosos devem ser removidos com removedor de manchas de óleo.

#### 3.2 Limpeza do interior da vitrine refrigerada

- Remova os produtos exibidos em câmaras frigoríficas ou câmaras refrigeradas.
- Evite interromper a cadeia de refrigeração.
- Desconecte o gabinete da fonte de alimentação elétrica e proteja-o contra reconexão por pessoas não autorizadas.

#### Limpeza das prateleiras:

- As superfícies podem ser limpas com sabão neutro ou detergente em água morna.

## Cleaning instruction

- Isso pode ser removido para limpeza.
- Para fazer isso, retire a cesta do gabinete e remova as duas porcas serrilhadas. A cesta pode então ser removida.

Remova o painel interno.

Coloque a cesta dentro para remover as porcas serrilhadas.

- Reinstale a cesta na ordem inversa. Alinhe o cesto e fixe-o com as porcas serrilhadas.
- Guarde as porcas serrilhadas com cuidado e substitua-as após a limpeza para fixar a cesta.

Verifique cuidadosamente se a cesta não tocará em nenhuma moldura ou vedação da vitrine ou porta.

- Limpe a bandeja da base com sabão neutro ou detergente em água morna. Verifique se o dreno está desobstruído.
- Reinstale a grade de retorno de ar.

Fig. 20

- Reinstale o deck de base.

Fig. 21

- Reinstale a cesta conforme descrito no capítulo "Retirada da cesta".

## 3.5 Reinício do gabinete

- Após concluir a limpeza e verificar atentamente se o interior do gabinete está completamente seco, coloque o aparelho novamente em operação, reconectando a energia ao gabinete.
- O gabinete iniciará então seu ciclo de resfriamento. Permita que os gabinetes atinjam uma temperatura exibida de -18°C antes de recarregar as mercadorias removidas.
